Trinity Health PACE is a unique service providing a full spectrum of health care services for frail elders who are certified as eligible for nursing home care.

1. The current PACE payment model excludes several chronic conditions as a factor in risk adjustment. One of those conditions is dementia; nearly 50 percent of all PACE participants currently live with dementia. The risk adjustment model must include dementia, pressure ulcer, moderate kidney disease and several mental health and substance abuse disorders currently excluded from the risk adjusted payment.

2. Currently PACE programs are not allowed to proactively offer their participants with dementia assistance in completing the Health Outcomes Survey-Modified (HOS-M). PACE organizations should be allowed to assist participants with dementia with the HOS-M survey to gain accurate responses and adequately represent them in the survey’s results.

3. Medicaid capitation rates must address the increased cost of care for the very frail population served. These rates must be addressed annually and in times of crisis.
