COVID-19 Order Sets / Order Panels

As Trinity Health and its ministries respond to Coronavirus (COVID-19), the health and safety of patients remains our top priority. Utilizing the most recent evidence, the COVID-19 IPC Clinical Group has designed a standard COVID-19 panel to facilitate efficient order entry. The panel can be:

- Embedded in appropriate admission sets
- Used as a standalone panel

The Order Panels have been approved as of April 17, 2020, to be built in each acute EHR system. The anticipated build completion date is April 24, 2020. Specific implementation dates and any subsequent changes to those dates will be communicated directly by the EHR build teams.

Hydroxychloroquine

Hydroxychloroquine has been included as a therapeutic treatment option for COVID-19. The FDA has required certain documentation pieces be included when ordering Hydroxychloroquine that has been obtained from the federal stockpile for use in COVID-19 patients. The approved COVID-19 order panel includes Hydroxychloroquine with comments that will satisfy the FDA requirements.

Additionally, the patient must be presented with a Hydroxychloroquine "Fact Sheet for Patients and Parents/Caregivers". The location and availability of the fact sheet will be communicated by the specific EHR build teams through their standard communication methods.
